Cambridge O Level

CANDIDATE NAME	

CENTRE NUMBER		CANDIDATE NUMBER	

CHEMISTRY **5070/21**

Paper 2 Theory **May/June 2019**

1 hour 30 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your centre number, candidate number and name on all the work you hand in.
Write in dark blue or black pen.
You may use an HB pencil for any diagrams or graphs.
Do not use staples, paper clips, glue or correction fluid.
DO **NOT** WRITE IN ANY BARCODES.

Section A
Answer **all** questions.
Write your answers in the spaces provided in the Question Paper.

Section B
Answer any **three** questions.
Write your answers in the spaces provided in the Question Paper.

Electronic calculators may be used.
You may lose marks if you do not show your working or if you do not use appropriate units.
A copy of the Periodic Table is printed on page 20.

At the end of the examination, fasten all your work securely together.
The number of marks is given in brackets [ ] at the end of each question or part question.
This document consists of **17** printed pages and **3** blank pages.

Cambridge Assessment International Education

BLANK PAGE

Section A

Answer **all** the questions in this section in the spaces provided.

The total mark for this section is 45.

1   Choose from the particles shown to answer the questions.

$^{79}_{35}Br$ $^{39}_{20}Ca$

$^{35}_{17}Cl$ $^{37}_{17}Cl^-$

$^{37}_{17}Cl$ $^{64}_{29}Cu$

$^{23}_{11}Na$ $^{20}_{10}Ne$

$^{17}_{8}O$ $^{18}_{8}O^{2-}$

Each particle can be used once, more than once or not at all.

(a) Which particle has only 20 protons in its nucleus?

   .... [1]

(b) Which particle has a nucleon number of 35?

   .... [1]

(c) Which particle has an electronic structure of 2.8.8?

   .... [1]

(d) Which particle is an atom with only 10 neutrons in its nucleus?

   .... [1]

(e) Which particle is an atom of a transition element?

   .... [1]

[Total: 5]

2 The table shows some of the properties of the elements in Group II of the Periodic Table.

element	proton (atomic) number	atomic radius /nm	melting point /°C
Be	4	0.089	1280
Mg	12	0.136	650
Ca	20	0.174	850
Sr	38	0.191	768
Ba	56	0.198	714
Ra	88		

(a) Explain why the elements in Group II have similar chemical properties.

....

.... [1]

(b) Explain why it is easier to predict the atomic radius of radium, Ra, than the melting point of radium.

....

....

.... [1]

(c) Magnesium chloride contains Mg^{2+} and Cl^- ions.

(i) Write the electronic configuration for a magnesium ion.

.... [1]

(ii) Magnesium is produced by the electrolysis of molten magnesium chloride.

Construct equations for the reactions taking place at the:

negative electrode ....

positive electrode. ....
[2]

(d) Magnesium reacts with aqueous copper(II) sulfate in a redox reaction.

$$Mg(s) + Cu^{2+}(aq) \rightarrow Mg^{2+}(aq) + Cu(s)$$
Which particle is reduced? ....

Explain your answer. ....

.... [1]

(e) Magnesium reacts with steam.

Name the products of this reaction.

.... [1]

(f) Calcium reacts with cold water.

Write the equation for this reaction.

.... [1]

(g) Magnesium chloride is a soluble salt.

Describe how a pure sample of magnesium chloride crystals can be made from magnesium.

....

....

....

....

....

....

....

....

....

.... [4]

[Total: 12]

3 Molybdenum, Mo, is a transition element.

(a) Suggest one physical property of molybdenum that is typical of a transition element.

.... [1]

(b) Suggest one chemical property of molybdenum compounds that is typical of compounds of transition elements.

.... [1]
(c) Molybdenum steel is an extremely hard alloy.

Suggest, using ideas about metallic structure, why molybdenum steel is much harder than pure iron.

A labelled diagram may help you answer this question.

....

....

.... [2]

(d) Molybdenum steel is made by reducing a mixture of MoO_3 and Fe_2O_3 with aluminium.

$$MoO_3 + 2Al \rightarrow Mo + Al_2O_3$$

$$Fe_2O_3 + 2Al \rightarrow 2Fe + Al_2O_3$$

Molybdenum steel contains 20.0% by mass of molybdenum.

Calculate the mass of MoO_3 needed to make 1000 g of molybdenum steel.

Give the answer to **three** significant figures.

[The relative atomic mass of molybdenum, Mo, is 96.]

mass of MoO_3 .... g [3]

[Total: 7]

4 Air is a source of many gases.

(a) What is the percentage by volume of nitrogen in dry air?

.... [1]

(b) Outline the separation of oxygen, nitrogen and the noble gases from liquid air.

....

....

....

....

....

.... [3]

(c) State one large scale use of nitrogen.

.... [1]

(d) Air contains gaseous pollutants.

(i) Name one gas that contributes to acid rain.

.... [1]

(ii) State one environmental consequence of an increase in the percentage of carbon dioxide in the air.

.... [1]

(iii) Describe the source of carbon monoxide in air.

....

.... [1]

[Total: 8]

5   Acid **U** is a compound containing carbon, hydrogen and oxygen.

   (a) A 6.30 g sample of **U** contains 1.68 g of carbon and 0.14 g of hydrogen.

   Calculate the empirical formula of **U**.

   empirical formula .... [3]

   (b) A 0.086 g sample of **U** is completely neutralised by 12.7 cm^3 of 0.150 mol/dm^3 KOH.

   One mole of **U** reacts with two moles of KOH.

   Calculate the relative formula mass of **U**.

   relative formula mass .... [3]

   (c) What is the molecular formula of **U**?

   .... [1]

   [Total: 7]

6 Propanoic acid is a weak acid.

Calcium hydroxide and calcium oxide are bases.

(a) What is the meaning of the term *acid* in weak acid?

....

.... [1]

(b) What is the meaning of the term *weak* in weak acid?

....

.... [1]

(c) Describe how universal indicator can be used to find the pH of dilute propanoic acid.

....

.... [1]

(d) Give a large scale use of calcium hydroxide that depends on its basic character.

.... [1]

(e) Calcium oxide reacts with water to form calcium hydroxide.

The reaction is exothermic.

Use ideas about bond breaking and bond forming to explain why the reaction is exothermic.

..

....

....

....

.... [2]

[Total: 6]

Section B

Answer **three** questions from this section in the spaces provided.

The total mark for this section is 30.

7 Ammonium carbonate, $(NH_4)_2CO_3$, is a white solid which decomposes when heated.

$$(NH_4)_2CO_3(s) \; \rightarrow \; 2NH_3(g) \; + \; CO_2(g) \; + \; H_2O(g)$$

(a) A small sample of ammonium carbonate is heated in a test-tube.

Describe how you will know when all the ammonium carbonate has decomposed.

....

.... [1]

(b) Calculate the total volume of ammonia and carbon dioxide, measured at room temperature and pressure, formed when 4.80 g of ammonium carbonate is completely decomposed.

volume of gas .... [3]

(c) Describe a chemical test for the ammonium ion.

test ....

observation ....

....
[2]

(d) Aqueous ammonium carbonate reacts with dilute hydrochloric acid.

Construct the ionic equation, including state symbols, for this reaction.

.... [2]

(e) Solid ammonium carbonate does not conduct electricity.

Aqueous ammonium carbonate conducts electricity.

Explain these two observations.

....

....

.... [2]

[Total: 10]

8 A scientist heats a sample of phosphorus(V) chloride in a closed container.

A dynamic equilibrium is established.

$$PCl_5(g) \; \rightleftharpoons \; PCl_3(g) \; + \; Cl_2(g)$$

(a) Describe what is meant by the term *dynamic equilibrium*.

....

....

.... [2]

(b) The pressure of the equilibrium mixture is increased.

The temperature of the equilibrium mixture is kept constant.

Predict and explain what will happen, if anything, to the **composition** of the equilibrium mixture.

prediction ....

....

explanation ....

....

....
[2]

(c) The temperature of the equilibrium mixture is increased.

The pressure of the equilibrium mixture is kept constant.

(i) Suggest why the position of equilibrium moves to the right.

.... [1]

(ii) Explain why the rate of the reaction increases.

....

....

.... [2]

(d) Draw the 'dot-and-cross' diagram for a molecule of PCl_3.

Only include the outer shell electrons.

[2]

(e) PCl_5 reacts with water to form hydrogen chloride and phosphoric acid, H_3PO_4.

Construct an equation for this reaction.

.... [1]

[Total: 10]

9 Food packaging produces lots of waste.

This waste includes both plastic and glass.

(a) One of the plastics is the addition polymer poly(propene).

Complete the equation by drawing the partial structure of poly(propene).

$$H_3C \diagdown_{} \diagup^H$$
$$C=C \quad \longrightarrow$$
$$H \diagup \diagdown H$$

[2]

(b) Plastic waste is disposed of by combustion.

Construct an equation to show the complete combustion of poly(propene).

Use the empirical formula of poly(propene), CH_2, in the equation.

.... [2]

(c) Some plastics are biodegradable.

(i) Suggest an advantage of a plastic that is biodegradable.

....

.... [1]

(ii) The partial structure of a condensation polymer is shown.

Draw the structure of the monomer used to make this polymer.

[1]

(d) Glass waste is melted and then made into new objects.

Use the kinetic particle theory to describe the changes in movement and arrangement of the particles when a solid becomes a liquid.

....

....

....

....

.... [2]

(e) Glass is made from sand, SiO_2.

Explain, in terms of structure and bonding, why sand has a high melting point.

....

....

....

....

.... [2]

[Total: 10]

10 Cyclobutane and butene are both hydrocarbons.
                cyclobutane   butene

(a) What is meant by the term *hydrocarbon*?

....

.... [1]

(b) Explain why cyclobutane and butene are isomers.

....

....

.... [1]

(c) Cyclobutane is saturated and butene is unsaturated.

Describe a chemical test that can distinguish cyclobutane from butene.

test ....

result for cyclobutane ....

result for butene ....
[3]

(d) Calculate the percentage by mass of carbon in butene.

percentage by mass .... [2]

(e) Ethene can be converted into ethanoic acid in a two-step process.
(i) Identify compound **X**.

.... [1]

(ii) Identify the reagent used in step **1**.

.... [1]

(iii) Identify the reagent used in step **2**.

.... [1]

[Total: 10]
